REVERSE IMAGE SEARCH

If a picture's worth a thousand words, *do the words always tell a true story*? Here's one way to find out.

What is it?

A reverse image search is when you use an image -- instead of a keyword -- to search the web. Instead of searching *for* an image, you're searching *with* an image.

**First...** **Go to the Google Images homepage:**
http://images.google.com

Then... **Search with an image!**
Pick one of these simple options:

1 Drag any image file into the search bar.

Search by image
Search Google with an image instead of text. Try dragging an image here.

images.jpg

Drop image here

2 Copy and paste an image URL, or upload an image file.

Search by image   ✕
Search Google with an image instead of text. Try dragging an image here.

| Paste image URL | Upload an image |

Search by image

3 Using *Chrome*, right-click any image and select "Search Google for Image."

Open Image in New Tab
Save Image As...
Copy Image
Copy Image Address
Search Google for Image
Inspect
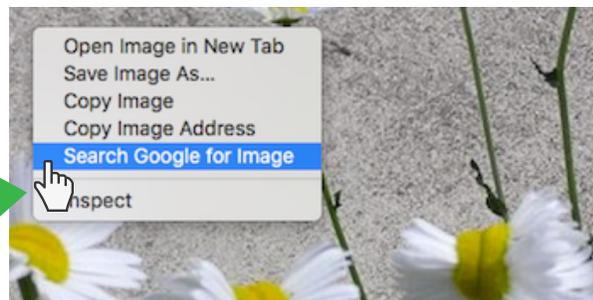

Now... **Interpret your results!**

Ask questions like: On what kinds of websites does this image appear? Are there any clues about where the image originated? Has the image ever been altered?
